

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

1. (cancelled)
2. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the process control system maintains the pressure of the fluid in the processor assembly at least about the saturation point of the fluid at a predetermined temperature.
3. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the flow splitter is a filtration device.
4. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the flow splitter is a reverse osmosis device.
5. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein at least one flow restrictor is a fixed setting flow restrictor.
6. (original) The fluid processor of claim 5, wherein the fixed setting flow restrictor is a fixed length capillary tube.
7. (withdrawn-currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein at least one flow restrictor is an adjustable setting flow restrictor.
8. (withdrawn) The fluid processor of claim 7, wherein the adjustable setting flow restrictor is a metering valve.
9. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the at least one pressure relief valve is a spring-loaded adjustable pressure relief valve.
10. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the fluid processor further comprises a check valve disposed upstream of the processor assembly.
11. (currently amended) The fluid processor of claim ~~[[1]]~~ 78, further comprising a

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

treatment assembly comprising a prefilter disposed upstream of the processor assembly

12. (original) The fluid processor of claim 11, wherein the treatment assembly further comprises a reverse osmosis device disposed downstream of the prefilter.

13. (original) The fluid processor of claim 11, wherein the treatment assembly further comprises a RODI apparatus disposed between the prefilter and the processor assembly, the RODI apparatus comprising a reverse osmosis device and an ion exchange device.

14. (withdrawn) The fluid processor of claim 11, wherein the treatment assembly further comprises a RODI apparatus disposed downstream of the processor assembly, the RODI apparatus comprising a reverse osmosis device and an ion exchange device.

15. (withdrawn) The fluid processor of claim 11, wherein the treatment assembly further comprises a RODI apparatus comprising: an ion exchange device disposed between the prefilter and processor assembly; and a reverse osmosis device disposed downstream of the processor assembly.

16. (currently amended) The fluid processor of claim [[1]] 78, wherein fluid processor processes feed water to produce sterile water for injection.

17. (currently amended) The fluid processor of claim [[1]] 78, further comprising:
a temperature sensor for measuring the temperature of the fluid in the processor assembly; and
a means controller for controlling the ~~temperature of the fluid in the processor assembly~~ fluid heater.

18. (currently amended) The fluid processor of claim [[1]] 78, further comprising an electronic control system for controlling the fluid processor, the electronic control system comprising:

a touch screen interface for providing readouts and operator input; and

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

a programmable logic controller for managing the electronic control system, the programmable logic controller comprising a main control circuit and a central processing unit and further, wherein the programmable logic controller is interfaced with a temperature sensor, a pressure transducer, ~~a means for controlling the temperature of the fluid in the processor assembly~~ controller for controlling the fluid heater, and a pump controller.

19. (original) The fluid processor of claim 18, wherein the programmable logic controller is further interfaced with an endotoxin sensor having a signal conditioner, a flow rate meter having a flow sensor, and a conductivity meter having a conductivity cell.

20. (withdrawn) The fluid processor of claim 19, wherein the endotoxin sensor, flow sensor and conductivity cell are disposed downstream of the processor assembly along a discharge line.

21. (previously presented) The fluid processor of claim 19, wherein the flow sensor and conductivity cell are disposed downstream of the processor assembly along a divert line.

22. (original) The fluid processor of claim 19, wherein the endotoxin sensor, flow sensor and conductivity cell are disposed along a divert line.

23. (cancelled)

24. (currently amended) ~~[[The]] A fluid processor of claim 23, wherein the fluid processor further comprises comprising:~~

a pump for drawing a fluid from a fluid source through a fluid inlet and pressurizing the fluid;

a processor assembly for processing the fluid from the pump, the processor assembly comprising:

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

a heat exchanger for recovering thermal energy;

a reactor for processing a fluid by heating;

and a heater for heating the reactor;

a process control system comprising: a flow splitter disposed between the pump and the processor assembly for diverting a portion of the fluid from the pump, a first flow restrictor for receiving the diverted fluid and directing the diverted fluid to the fluid inlet, a pressure relief valve disposed between the first flow restrictor and the flow splitter, and a second flow restrictor disposed downstream of the processor assembly, wherein the flow splitter, first flow restrictor, second flow restrictor and pressure relief valve are constructed and arranged to coact with each other to control the pressure and flow rate of the fluid in the fluid processor;

a sanitization assembly comprising:

an isolation valve disposed immediately downstream of the fluid inlet;

a drain valve disposed at the lowest point of the fluid processor and between the pump and the processor assembly; and

a startup loop assembly comprising:

a first fluid path running from the isolation valve to the reactor;

a second fluid path running from the isolation valve to the pump;

a startup flow restrictor disposed immediately downstream of the isolation valve and positioned along the first fluid path; and

a four-way valve disposed immediately downstream of the startup flow restrictor and the pump, the four-way valve having

a first connection for receiving fluid from the startup

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

flow restrictor,

a second connection for directing fluid from the startup
flow restrictor to the reactor,

a third connection for receiving fluid from the pump,
and

a fourth connection for directing the fluid from the
pump to the heat exchanger, and further,

wherein the four-way valve has a startup position for
directing fluid from the startup flow restrictor to the reactor through
the first and second connection and a normal position for directing the
fluid from the pump to the heat exchanger through the third and fourth
connection.

25. (original) The fluid processor of claim 24, wherein startup flow restrictor is a fixed
setting flow restrictor.

26. (original) The fluid processor of claim 24, wherein the startup flow restrictor is an
adjustable setting flow restrictor.

27. (previously presented) A method for sanitizing the fluid processor of claim 24
during startup, the method comprising:

connecting the fluid inlet to the fluid source wherein the fluid source has a line
pressure of not less than about 10 psia and not greater than about 800 psia;

switching the four-way valve to the startup position;

opening the isolation valve;

introducing fluid into the fluid processor at line pressure;

switching on the heater;

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

allowing steam generated by the heater to flow downstream of the reactor and exit at a fluid outlet; and

switching the four-way valve to the normal position.

28. (original) A method for sanitizing the fluid processor of claim 24 during shutdown and storage, the method comprising:

turning off the pump and heater;

closing the isolation valve;

allowing residual heat of the reactor to produce steam from the fluid in the processor assembly;

allowing the steam to generate a pressure in the processor assembly;

allowing the pressure to expel the fluid that is downstream of the processor assembly out through a fluid outlet;

opening the drain valve to discharge the fluid that is upstream of the processor assembly;

attaching a closure means to the fluid outlet when fluid ceases to flow from the fluid outlet; and

closing the drain valve when the fluid ceases to flow from the drain valve.

29. (original) The method of claim 28, wherein the closure means is a container holding a sterile solution.

30. (previously presented) The method of claim 28, wherein the closure means is a filter.

31. (withdrawn-currently amended) The fluid processor of claim [[23]] 24, wherein the heat exchanger is a shell-and-tube heat exchanger and further, wherein a process fluid flows through a shell side of the heat exchanger and a product fluid flows through a tube side

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

of the heat exchanger.

32. (currently amended) The fluid processor of claim [[23]] 24, wherein the heat exchanger is a tube-in-tube heat exchanger and further, wherein a process fluid flows through an annular side of the heat exchanger and a product fluid flows through a tube side of the heat exchanger.

33. (original) The fluid processor of claim 32, wherein the heat exchanger is a helical coil tube-in-tube heat exchanger.

34. (original) The fluid processor of claim 33, wherein the reactor and the heater are nested within the heat exchanger.

35. (original) The fluid processor of claim 34, wherein the reactor and the heater are disposed within a temperature homogenizer.

36. (withdrawn) The fluid processor of claim 35, wherein the temperature homogenizer comprises a multiplicity of blocks, the blocks being joined together by fasteners.

37. (original) The fluid processor of claim 35, wherein the temperature homogenizer is a unitary structure produced by casting and further, wherein the reactor is formed as an integral part of the temperature homogenizer.

38. (original) The fluid processor of claim 35, wherein the temperature homogenizer is enclosed by an insulation jacket.

39-44. (cancelled)

45. (withdrawn-currently amended) The fluid processor of claim [[1]] 78, wherein the heater is a hot gas heater and further, wherein the processor assembly further comprises:

a helical coil tube-in-tube heat exchanger for exchanging heat between a process fluid and a product fluid; and

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

a helical coil-shaped reactor nested within the heat exchanger for processing
~~the process fluid to the product fluid by heating; and~~
~~a hot gas heater for heating the reactor.~~

46. (withdrawn) The fluid processor of claim 45, wherein the processor assembly further comprises an insulated duct having a hot gas inlet at one end and a vent at the other end and further, wherein the heat exchanger is disposed within the insulated duct.

47. (withdrawn) The fluid processor of claim 45, wherein the processor assembly further comprises a hot gas tube and an insulated enclosure having an opening at the top and further, wherein the heat exchanger is disposed within the enclosure and the reactor is disposed within the hot gas tube and further, wherein the hot gas tube is nested within the heat exchanger.

48. (withdrawn-currently amended) The fluid processor of claim ~~[[1]]~~ 78, wherein the processor assembly further comprises a multiplicity of heat exchangers for exchanging heat between a process fluid and a product fluid.

49. (withdrawn) The fluid processor of claim 48, wherein at least two heat exchangers are connected together in parallel.

50. (withdrawn) The fluid processor of claim 48, wherein at least two heat exchangers are connected together in series.

51. (withdrawn) The fluid processor of claim 48, wherein at least one heat exchanger is a tube-in-tube type heat exchanger.

52. (withdrawn) The fluid processor of claim 48, wherein at least one heat exchanger is a helical coil tube-in-tube type heat exchanger.

53. (withdrawn) The fluid processor of claim 48, wherein at least one heat exchanger is a rope rug coil tube-in-tube heat exchanger.

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

54-72 (cancelled)

73. (withdrawn) The fluid processor of claim 19, wherein the endotoxin sensor is disposed along a sampling line.

74. (withdrawn-currently amended) The fluid processor of claim [[1]] 78 further comprising:

a temperature sensor for measuring the temperature of the fluid upstream of the processor assembly.

75. (withdrawn-currently amended) The fluid processor of claim [[1]] 78 further comprising:

a temperature sensor for measuring the temperature of the fluid downstream of the processor assembly.

76. (withdrawn-currently amended) The fluid processor of claim [[1]] 78 further comprising:

a pressure sensor for measuring the pressure of the fluid upstream of the processor assembly.

77. (withdrawn-currently amended) The fluid processor of claim [[1]] 78 further comprising:

a pressure sensor for measuring the pressure of the fluid downstream of the processor assembly.

78. (currently amended) A fluid processor comprising:

a pump for drawing a fluid from a fluid source through a fluid inlet and pressurizing the fluid;

a processor assembly comprising a fluid heater for processing heating the fluid from the pump;

Application No. 10/618,133
Amdt. under Rule 116 faxed May 19, 2006
Attorney Docket No. ARA-US-P1

a process control system comprising: a flow splitter disposed between the pump and the processor assembly for diverting a portion of the fluid from the pump, a first flow restrictor for receiving the diverted fluid and directing the diverted fluid to the fluid inlet, a first pressure relief valve disposed between the first flow restrictor and the flow splitter, a second pressure relief valve disposed between an upstream side of the processor assembly and a downstream side of the flow splitter and a second flow restrictor disposed downstream of the processor assembly,

wherein the flow splitter, flow restrictors and pressure relief valves are constructed and arranged to coact with each other to control the pressure and flow rate of the fluid in the fluid processor.

79. (previously presented) The fluid processor of claim 78, wherein the process control system further comprises a third pressure relief valve disposed downstream of the second flow restrictor.
